DETAILED ACTION

Allowable Subject Matter

1. Claims 1-45 are allowable over the prior art of record.
2. The following is a statement of reasons for the indication of allowable subject matter:

As per independent claims 1, 16, and 31, the recited claim language pertaining to generating speech feature vectors include a non-acoustic parameters and a non-acoustic glottal shape parameter, is not explicitly taught by the prior art of record. An example of the prior art of record, Chengalvarayan et al (6055499) teaches a method for speech characterization comprising collecting a plurality of data from a speaker (as collecting data from multiple speakers → col. 5 lines 22-33); generating multiple baseline vectors (col. 5 lines 49-57), from which periodicity and jitter are calculated (col. 5 lines 57-66), wherein jitter is defined as the measure of fluctuation in glottal cycle lengths (col. 2 lines 54-56); generating multiple baseline vector parameters (col. 5 lines 49-57); training set uses multiple repetition (col. 5 lines 30-47). Chengalvarayan et al (6055499), as well as the other prior art of record, does not explicitly teach the recited claim limitations above. Furthermore, it would not have been obvious to one of ordinary skill in the art of speech modeling to modify the teachings of the prior art of record to obtain the recited claim limitations of the independent claims as recited above.
